

Space Runner

Nicholas Soffa – CMSI 402 – Spring 2017

Description

Space Runner is a 2D side scrolling platforming game where the player controls a space marine and fights to survive in never ending corridors of enemies and traps.

The space marine can also travel back and forth between two linked versions of these randomly generated hallways.

Motivation

I have seen so many infinite running type games developed and put on app stores and I wanted to simultaneously give my own spin on the genre and give the player more control over how they interacted with the game.
